

A standalone Business Unit of an American hydrocarbon exploration company required a detailed review of their Well Integrity Management Standards (WIMS) to ensure that they were in line with ISO 16053-1, Norsok D10 and MOG SUB04-B01-Guidelines-Wells-Well Integrity.

The exploration unit had engaged PetroEdge to carry out a technical review which covered these key activities:

- ✓ Submitted a report commenting on above documents and providing further guidance to improve the documents.
- ✓ Provided support in the preparation of the Well Integrity Testing Guidelines.
- ✓ Reviewed Suspension & Abandonment SOPs.
- ✓ Be on call in the subsequent months for any amendments required.
- ✓ Conducted a Review of Well Integrity Failures and Investigations.

In addition to providing remote assistance, PetroEDGE facilitated the roll out of subsequent WIMS and provided the necessary training to enhance both the management system and relevant SOPs.
